 **Speed Queen**
The Proven Performer in Laundry

Made in USA

Built to last up to 25 years

QUALITY ASSURED, SUPER DURABLE MACHINES

Speed Queen laundry equipment is manufactured in the United States. Our powerful yet gentle machines are made from premium quality materials.

We apply strict quality checks and test our machines for up to 10,400 cycles – at 8 cycles per week, that's 25 years of fresh clean laundry.

Speed Queen®: More than 100 years doing laundry

Say hello to Speed Queen, America's favourite home laundry. Based in Ripon WI, USA, we began producing the industry's most trusted, highest performing laundry equipment in 1908. We've been dedicated solely to laundry ever since.

Speed Queen is from Alliance Laundry Systems, the world leader in commercial laundry. All Speed Queen machines feature commercial laundry technology that's built to deliver professional results in your home for decades.

Your new laundry decision just became easier

Today, homemakers equipping a laundry basically have three choices:

1.

Lightweight low-cost domestic machines. They wear out fast and soon need replacing.

2.

High-cost domestic machines from appliance companies. They have many product lines and typically under-invest in laundry research.

3.

Speed Queen professional laundry equipment. The same high performance machines found in premium commercial laundries worldwide.

Cleaner, softer, fluffier fabrics

There's a good chance you've already experienced Speed Queen quality laundry.

Remember those gorgeously fluffy towels at that five star resort? Or the beautiful pristine linen at that fantastic restaurant? Those are the kind of places that use Speed Queen laundry equipment.

We know to make fabrics feel cleaner, softer, fluffier.... And they last longer too.

Speed Queen performance comes from our unique commercial pedigree. Laundry professionals rely on Speed Queen for outstanding results as well as reliability and long-term value. Now you can enjoy that value in your home.

Domestic laundry vs Commercial laundry

Home machines

- The power/capacity ratio in most home laundry appliances is not really enough for truly effective cleaning.
- Built with lower quality components, often substituting plastic for metal.
- Over-complicated controls and flashy but unnecessary features.
- Designed to impress shoppers, not business investors.
- Short lifespan, planned obsolescence.
- Uneven service quality, appliance expertise not laundry expertise.

Professional machines

- High power, large capacity for no-compromise deep, gentle, fabric clean and care.
- High quality components made from high quality materials.
- Simple controls and purpose-driven innovation.
- Designed to deliver long-term value in fabric care and reliability.
- Long lifespan, built and tested to last 25 years* in the home.
- Professional service dedicated solely to maximum laundry uptime.

*Taking into account that our machines are tested to last up to 10,400 washing cycles (8 washing cycles per week, per 52 weeks a year, equals 25 years).
